

Retail pains worth solving

SynderHacks Wrocław
November 8-9, 2025

Meet Andrzej

Andrzej knits cozy socks and sells them on **Etsy**.
One product, one channel, one spreadsheet.

👉 Everything is simple.
Orders come, he ships them, customers are happy.
No pain yet — only joy.

Growth Begins

He even dyed his beard to catch up with everything like a Viking!

Sales pick up.

Andrzej adds new colors, sizes, and packaging.
He opens a **Shopify** store to look more professional.

Now it starts to hurt:

- Hard to understand **what sells best**.
- **Inventory mistakes** — some items sold out, others forgotten.
- **Late shipments** — stock info is wrong or missing.
- Time spent packing instead of knitting.

Expanding Channels

Etsy + Shopify aren't enough.

Andrzej lists socks on **Amazon** and **eBay**.

The chaos grows:

- Every product must be uploaded to multiple channels — Shopify, Amazon, Etsy, TikTok Shop, etc.
- Each platform requires different formats (titles, descriptions, images, categories, taxes).
- Updating prices, inventory, or photos has to be done one platform at a time — no single source of truth.
- The real pain isn't just errors — it's the time, repetition, and constant risk of outdated product info.

Andrzej changed his style again, and showing to you his laptop screen so that you see how tough it is!

Inventory Management & Forecasting

Retailers struggle with inventory management.

Stockouts and Overstock

Lack of Single View

Reactive Planning

Poor Demand Forecasting

Scaling Up Production

Andrzej outsources knitting to a small workshop.
He starts managing suppliers, yarn stock, and payments.

New pains appear:

- Hard to track **what was ordered and what arrived**.
- **Supplier invoices** get lost or duplicated.
- **Too much money** stuck in unused materials.
- No clear view of **production costs** per batch.

Fulfillment and Logistics

Demand grows abroad.

Andrzej partners with a **fulfillment warehouse** (3PL) to ship faster.

Now he's managing shipments he never sees.

- **Wrong routing.** Orders go from the wrong warehouse → higher shipping costs.
- **Lost packages and customer complaints.**
- **Complex tax zones.** Each destination country adds different VAT and customs rules.
- **Partial shipments.** Some customers get half their order — hard to track who owes what.

Order Fulfillment & Routing

Taxes & Compliance

Retailers are expected to:

1. Charge the correct tax for each sale (**product, location, nexus**).
2. Handle different tax systems (**sales tax, VAT, GST**).
3. Know when marketplaces collect and remit tax for them.

Manual tax work leads to mistakes, penalties, and late filings.

Retailers don't want to be tax experts — they just want taxes handled correctly!

Money Maze

Money flows through Amazon, Stripe, Shopify Payments, eBay Payments, Etsy, and PayPal.

- **Payout delays.** Some payments arrive instantly, others a week later.
- **Unclear cash position.** He doesn't know how much money is actually coming.
- **Hidden fees.** Every marketplace takes a cut differently.
- **Currency loss.** Foreign sales create exchange-rate surprises.
- **Forecast paralysis.** He can't plan restocks because he doesn't know when cash arrives.

He now has two eBay's: one of them is blue.

Cash in Transit & Payout Timing

Cash in Transit & Payout Timing

Reconciliation Headache

His accountant struggles to match data:

- Orders don't equal payments.
- Fees and refunds don't match records.
- Each platform has its own reports.
- Closing the books takes weeks instead of days.

Reconciliation

Sales recorded in Shopify, Amazon, or other platforms almost never match what arrives in the bank.

Why? Payment processors can deduct:

- Fees
- Refunds
- Disputed amounts
- Tax withholdings
- Currency conversions, and more.

Reconciliation

1

Record Sales

Sales are recorded on various platforms.

2

Process Payments

Payment processors deduct fees and more.

3

Transfer Funds

Funds are transferred to the bank.

4

Reconcile Data

Manually match sales and bank data.

5

Generate Reports

Create accurate financial reports.

Returns and Chargebacks

As business grows, so do returns.

- **Customers send back socks** that don't fit or arrive late.
- **Hard to track** if returned items can be resold.
- **Refunds take time** and confuse the accounting.
- **Chargebacks** from payment providers eat profits.

Returns, Refunds & Disputes

Losing the Big Picture

Now Andrzej runs a real business — but it's blurry.

He doesn't know:

- Which **channel or product** makes the most profit.
- How much stock he should reorder.
- Why **sales go up but cash goes down**.
- Where to focus his time.

The Moment of Truth

What started as simple joy has turned into operational pain.

Andrzej's day is full of spreadsheets, invoices, and confusion.

He can't grow further — not because of demand,
but because of **complexity**.

The Retail Pain Map

Let's Build Something Great

Every step creates **data**.

Every step creates **risk**.

Every step creates **opportunity**.

You now see the real retail workflow — and where the pain points are.

This is where your ideas take over.

We're excited to see what you create:) Good luck!
